STILSOFT

TESTING LABORATORY

The laboratory conducts certification tests of technical means to ensure equipment's compliance with the requirements of the Government Decree of the Russian Federation No. 969 and Federal Law No. 16-FZ «On Transport Security».

STILSOFT testing laboratory provides services throughout the territory of the Russian Federation. We also hold field certification tests of security products at the applicant's transport infrastructure facilities.

^ CERTIFIED

VERIFICATION LABORATORY

The laboratory provides metrological verification for a big number of systems for photo and video recording of traffic violations.

The advantage of STILSOFT laboratory is a «turnkey» verification of photo and video recording systems of traffic violations directly at the system installation place.

STILSOFT

INTEGRATED SECURITY SYSTEM «SYNERGET»

designed to organize the protection
and defense of the facility, response force control

SYNERGET

«Synerget» Integrated security system (ISS) is a hardware and software system with artificial intelligence elements. «Synerget» includes multiple elements with each of them being a functional and finished product. All the components can operate separately or – by combining with other parts into a single «Synerget» ecosystem – organize a system for ensuring security at facilities of any scale and complexity

SYSTEM STRUCTURE:

01	video surveillance system (VSS)	includes a series of video cameras and video servers of our own production, supports contemporary integration protocols for third-party cameras, enables display and recording of video channels, has a built-in system of video analytics
02	access control and management system (ACMS)	includes a series of network controllers and a set of terminal equipment, enables implementing complex entry algorithms. The system uses original algorithms for identifying license plates, face recognition and controlling body temperature. It is certified for handling personal data
03	perimeter protection system (PPS)	includes a data transmission and power management system based on universal controllers and security sensors with various physical operating principles of our own production
04	intrusion alarm system (IAS)	consists of network-based receipt and control devices and security detectors. Devices are highly reliable and have a stylish industrial design

05	fire alarm system (FAS)	detects early signs of the fire or smoke appearance at the protected area, timely informs the staff about the fire and the need to evacuate, as well as instructs on the evacuation ways and order includes addressable and analogue-addressable receipt and control devices and fire sensors. «Synerget» also supports integration with third-party FAS
06	public address system (PAS)	includes a series of network transmission amplifiers and loudspeakers with an Ethernet interface and standard PoE power supply
07	data collection and processing system (DCPS)	has a user-friendly interface and extensive application of artificial intelligence. DCPS includes decision support and multiple analytical subsystems

«Synerget» integrated security system widely applies an Ethernet technology and the Industrial Internet of Things concept enabling implementing decentralized distributed systems in the modular design principle. This approach multiplies the system reliability, minimizes the human factor impact throughout the design and equipment stages and also simplifies the facility operation.

«Synerget» ISS is the special software adapted to work with different operating systems, protected and certified for handling classified information.

Specialized products based on SYNERGET ISS:

«SYNERGET VK» integrated security system
is for the highest protection category facilities of the Ministry of Defense of the Russian Federation

**«ACCEPTED FOR SUPPLY OF MINISTRY
OF DEFENSE OF RUSSIAN FEDERATION»**

«SYNERGET 1 SV» integrated security system
is for I, II and III protection category facilities of the Ministry of Defense of the Russian Federation

**«ACCEPTED FOR SUPPLY OF MINISTRY
OF DEFENSE OF RUSSIAN FEDERATION»**

«SYNERGET SETMSP» integrated security system
is for facilities of the Border Control Service by Federal Security Service of Russia

**«RECOMMENDED FOR USE BY FEDERAL
SECURITY SERVICE OF RUSSIA»**

All SYNERGET devices are intelligent and interact with each other.

STILSOFT

SPECIAL SOLUTIONS FOR FEDERAL FORCES

«AVANPOST»

AUTONOMOUS VIDEO AND
THERMAL IMAGING SYSTEM

ACCEPTED FOR SUPPLY
OF BORDER CONTROL SERVICE
BY FEDERAL SECURITY SERVICE
OF RUSSIA

ACCEPTED FOR SUPPLY
OF MINISTRY OF DEFENSE
OF RUSSIAN FEDERATION

Provides security and intellectual video surveillance
of large open spaces and state borders

System provides 24/7 visual control to detect various types of targets at the distance up to 10 km. The main element of the system is an optical-electronic module: a long-range video camera and thermal imaging camera. The system transfers real time video information to the operator's workplace, located remotely from the linear observation post.

Features: autonomous power supply using wind and solar energy, target detection in all weather conditions using radar; easy operation, high reliability.

«MUROM»

FAST-DEPLOYMENT AUTONOMOUS
MOBILE VIDEO SURVEILLANCE
AND THERMAL IMAGING SYSTEM

The system is designed for fast deployment of 24/7 long-range video and thermal imaging surveillance post at large open spaces

System provides 24/7 visual control to detect various types of targets at the distance up to 10 km. The system includes a pneumatic mast, an optical-electronic module with a long-range video camera and thermal imager; autonomous power supply system based on solar modules and a gasoline generator. System allows operators to see real time video on a rugged notebook or at the operator's automated workstation located remotely from the system installation place (automated operator's workstation is not included into the delivery package, can be supplied separately). System deployment time is less than 1 hour.

Specialized products based on the MUROM system:

ACCEPTED FOR SUPPLY
OF MINISTRY OF DEFENSE
OF RUSSIAN FEDERATION

ACCEPTED FOR SUPPLY
OF BORDER CONTROL SERVICE
BY FEDERAL SECURITY SERVICE
OF RUSSIA

«MUROM 1 SV» - designed to protect temporary locations of moving military units outside of their permanent locations

«MUROM-P» - designed for State Border protection tasks

«BARRIER»

ARMORY VAULT
DOOR SECURITY SET

ACCEPTED FOR SUPPLY
OF MINISTRY OF DEFENSE
OF RUSSIAN FEDERATION

Is intended for arranging security measures in weapon storage room and restricted access rooms.

A metal door with embedded equipment: two video cameras, process controller and a set of wireless security sensors (volumetric, surface and sound ones). The set provides physical barrier to entry, detecting intrusion signs in secured facility and video recording. The set also implements collecting, processing, transmitting and providing information, SMS reporting, voice announcement on tampering, alarm and emerging malfunctions.

«SCORPIO»

OFF-ROAD VEHICLE BASED
VIDEO SURVEILLANCE AND
THERMAL IMAGING SYSTEM

ACCEPTED FOR SUPPLY
OF BORDER CONTROL SERVICE
BY FEDERAL SECURITY SERVICE
OF RUSSIA

Off-road vehicle based system for fast deployment of 24/7 long-range video and thermal imaging surveillance post at large open spaces.

The system includes: pneumatic mast (4.2m height), optical-electronic module with a long-range video camera and thermal imager installed in the cargo compartment of the car. Provides 24/7 visual control to detect various types of targets at the distance up to 10 km. The operator's workplace is located in the passenger part of the car. The car is equipped with a night driving set, autonomous interior heater and air conditioning. Radar is used to detect targets in difficult weather conditions.

«ENERGET 1 CMBA»

BACKUP POWER
SUPPLY SYSTEM

ACCEPTED FOR SUPPLY
OF MINISTRY OF DEFENSE
OF RUSSIAN FEDERATION

Is intended for arranging backup power supply in security sites

Structurally, ENERGET 1 CMBA is a metal container with a 30 kW diesel generator located inside and an uninterruptible power supply of the same power. The container is equipped with a heating and ventilation system that allows to work efficiently in a wide temperature range.

Embedded security subsystem provides access control, fire protection and prevents unauthorized fuel use. ENERGET 1 CMBA supports automatic switching of power supply between consumers without interrupting their power supply.

«HIVE 1 M»

MOBILE ACCESS
CONTROL SET

ACCEPTED FOR SUPPLY
OF MINISTRY OF DEFENSE
OF RUSSIAN FEDERATION

Designed for fast-deployment organization of temporary access control checkpoints

The set consists of a mobile control point – a rugged notebook laptop, smartphone based mobile readers and a set of proximity cards. The mobile control point works as a checkpoint office. The mobile reader allows to identify visitors using proximity cards and biometric face verification. The mobile reader can be operated from the control center (via wireless communication channels) and also can work independently.

«SKYRON O»

UAV BASED ADJACENT TERRITORY CONTROL SYSTEM

Provides operational monitoring and video shooting of protected areas; violators detection, missing people search in emergency places

The system includes UAV equipped with a removable payload and a ground control station. UAV provides video and thermal imaging surveillance. UAV flight control, flight tasks configuration, viewing and recording the data received in a real time mode - are carried out from the ground control station.

Features: possibility of fully automated flight task performance, as well as reliable functioning in difficult weather conditions.

«SKYRON SO»

UAV BASED ADJACENT TERRITORY MONITORING SYSTEM

Provides operational monitoring and video recording of protected areas; facility perimeter patrolling, visualization of alarm signals received from security sensors or radars used in the perimeter protection system.

System includes: start container, UAV and automated operator's workstation, which can be located remotely. The start container is used for UAV basing, take-off, landing, charging UAV's battery, weather conditions monitoring and organizing communication between UAV and operator. Take-off and landing to the container are possible both in fully automated or manual mode. The range of the system is 5 km. UAV can be equipped with a video camera or a thermal imager.

Features: reliable functioning in difficult weather conditions, as well as effective counteraction to electronic warfare means.
